Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over KR 99-13213 A (LG ELECTRONIC CO., LTD.) ("LG") in view of Hansen (U.S. 5,464,220).
3. Claims 1-10 relate to a system and method for correcting a golf swing of a golfer using the Internet, comprising: photographing means for photographing a golf swing of a golfer and outputting corresponding data; image processing means; weight center detecting means; control means for receiving the image and outputting moving picture data; display means for displaying the output moving picture data; and a Web server for outputting golf swing correcting data or moving picture data.
4. LG discloses a position correction system using the image comparison, comprising: an image pickup device for converting an optical signal into an image signal according to the movement that is photographed; a digital conversion means for converting the image signal into digital image data and outputting the data; storing means for storing the image data; image detection/comparison means for outputting an image signal; edge detection means for detecting an edge image through preprocessing the converted image data; and an error imaging means for comparing the edge data and generating error data and image data.
5. LG discloses all of the claimed subject matter except for how the invention is used.

6. Hansen teaches a golf practice device comprising a first strip having indicia for indicating proper positioning of a golfer's feet; a second strip from and parallel to said first strip and having a ball marker for indicating a proper ball position, and a plurality of predetermined corner angles corresponding to a plurality of golf clubs, whereby, by arranging said strips to form a selected one of said predetermined corner angles on a template, the correct golf stance and ball placement is indicated for a selected golf club.

7. It would be obvious at the time of Applicant's invention to incorporate the features of Hansen in LG. Doing so would add a weight distribution measuring device to LG making the golf practice device more realistic to actual golfing.
